

IMDB Top 1000 Movies – Exploratory Data Analysis (EDA) Portfolio

Project Objective

Performed a complete Exploratory Data Analysis (EDA) on the IMDB Top 1000 Movies dataset (~1,000 titles) using Excel. The goal was to understand what drives high ratings, audience engagement, and commercial success, with a focus on descriptive statistics, distributions, correlations, and outliers.

Tools & Process

- **Tools:** Microsoft Excel (Power Query for cleaning, Data Analysis ToolPak for statistics & histograms, PivotTables, Charts, Conditional Formatting, Formulas)
- **Steps:**
 1. Data cleaning

2. Descriptive statistics (mean, median, std dev, min/max)
3. Distributions analysis using histograms
4. Correlation analysis with scatterplots
5. Outlier detection using conditional formatting and z-score style logic
6. Insight generation and visualization
